REQUIRED BUSINESS INSIGHTS

Top 5 Findings • Top 5 Business Problems • Top 5 Recommendations

Prepared from the uploaded Power BI assignment and sales dataset.

Top 5 Findings

What the uploaded sales data indicates

01

Sales remained broadly stable

Total sales were approximately ■11.69M in 2021 and ■11.57M in 2022, representing a decrease of about 1.1%.

02

2023 is a year-to-date view

The 2023 sales table contains transactions only through March 15. Sales for this period were approximately ■2.40M, so it should not be treated as a full-year comparison.

03

Revenue is concentrated among leading products

The five highest-revenue products were Product 63 (■628,320), Product 28 (■604,274), Product 47 (■556,710), Product 29 (■534,222), and Product 84 (■528,827).

04

Product profitability varies

Product 28 generated about ■247,808 profit with an estimated 41.0% margin, while Product 4 generated ■62,478 profit on ■417,222 sales, an estimated 15.0% margin.

05

Location performance is uneven

Rialto generated the highest total sales at approximately ■465,604, followed by Roseville, Victorville, El Monte, and Escondido.

Insight: The dataset points to relatively stable full-year sales, strong contribution from a limited set of products, differences in product margins, and meaningful variation across locations.

Top 5 Business Problems Identified

Key areas requiring management attention

1. **Limited annual sales growth**
   2022 sales were slightly below 2021, indicating that the available full-year data does not show clear annual revenue growth.
2. **Incomplete 2023 visibility**
   Only January 1–March 15 transactions are available for 2023, limiting full-year trend analysis and direct comparison with 2021 and 2022.
3. **Uneven product profitability**
   Some products generate high revenue but comparatively lower margins, creating a need to evaluate pricing, cost, and product mix.
4. **Uneven location performance**
   Sales vary across locations, making it important to identify the operational or market factors associated with stronger and weaker performance.
5. **Fragmented performance monitoring**
   Management needs a centralized BI view to connect sales, profit, products, customers, salespeople, locations, time trends, and budget performance.

Why these problems matter

The assignment is designed to move management from manually prepared reports toward an interactive Power BI solution. The dashboard should make it easier to identify performance changes, compare products and locations, evaluate profitability, and monitor actual sales against budget.

Top 5 Recommendations

Action areas supported by the analysis

01

Prioritize profitable products

Evaluate product performance using sales, profit, and margin together rather than relying on revenue alone. Review high-sales/low-margin products for pricing or cost optimization.

02

Investigate the sources of weak growth

Use monthly and quarterly trends, product mix, customer contribution, salesperson performance, and location performance to identify where growth is slowing.

03

Use 2023 as a year-to-date benchmark

Compare 2023 with the equivalent 2022 period instead of comparing the incomplete 2023 total with full-year figures.

04

Strengthen location-level decision making

Compare locations using sales, profit, population, household information, and budget variance to identify areas that need attention and areas that perform strongly.

05

Build one interactive management dashboard

Use KPI cards, YoY analysis, product/customer/salesperson rankings, geographic views, budget-vs-actual analysis, slicers, drill-downs, and drill-through pages in Power BI.

Executive Summary

A concise management view

The available data shows substantial sales and profit activity across products and locations, but the two complete years do not show clear revenue growth. Product and location performance is uneven, while product margins differ significantly. The 2023 table is only available through March 15, so year-to-date comparisons are more appropriate than treating 2023 as a completed year. A centralized Power BI dashboard can connect sales, profitability, product, customer, salesperson, geographic, time, and budget measures in one interactive view.

Key Dataset Metrics

2021 SALES	2022 SALES	2022 YOY	2023 YTD
■11.69M	■11.57M	−1.1%	■2.40M

Overall Sales	Overall Profit	Overall Margin
■25.66M	■8.34M	≈32.5%

DATA NOTE
2023 contains data only through 15 March 2023. Therefore, the 2023 total is presented as a year-to-date figure and should not be interpreted as a full-year result.

Assignment alignment: The report follows the Business Insights deliverable specified in the uploaded Power BI assignment: Top 5 findings, Top 5 business problems identified, and Top 5 recommendations.
